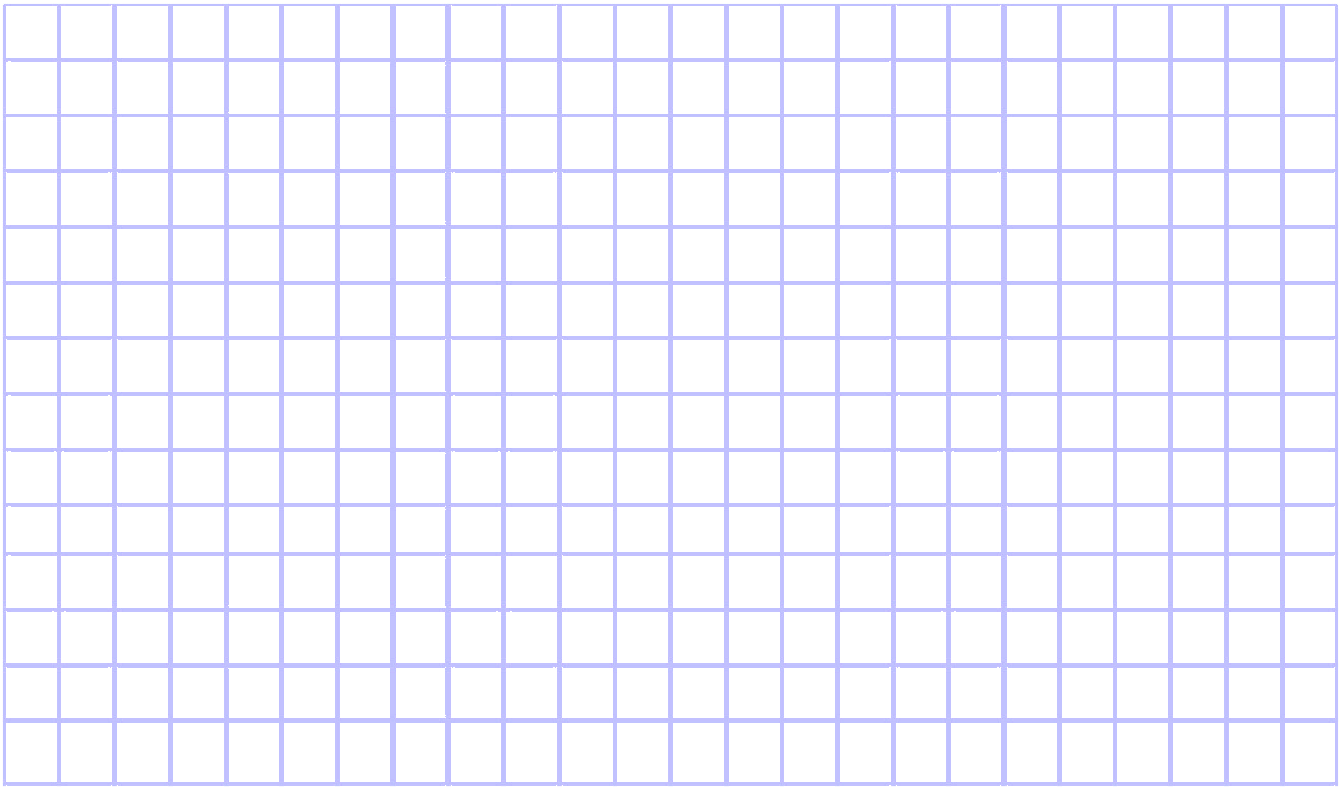
Getting Started…

5 Important first steps to starting your project…

1. Gather photos, magazine clippings and any images that capture the feeling or vision you are trying to achieve.
2. Locate any existing drawings of your home and a copy of your property survey
3. Explore scope of the project (needs vs. wants – likes vs. dislike – wish list)
4. Establish project budget
5. Determine target completion date (especially if there are any special events upcoming)


Notes:
